PREMIS and METS: dArceo case study

Tomasz Parkoła (tparkola@man.poznan.pl)
Network Services Department, PSNC

Digital libraries infrastructure in the PIONIER network

- Developed since 2002
- Consists of around 100 digital libraries
- Collaborative effort of several hundreds of research and cultural institutions including local networking and computing centers
- Over 1.7M digital objects available on-line for the information society

Toolset for Polish digital libraries

Developed and provided by PSNC

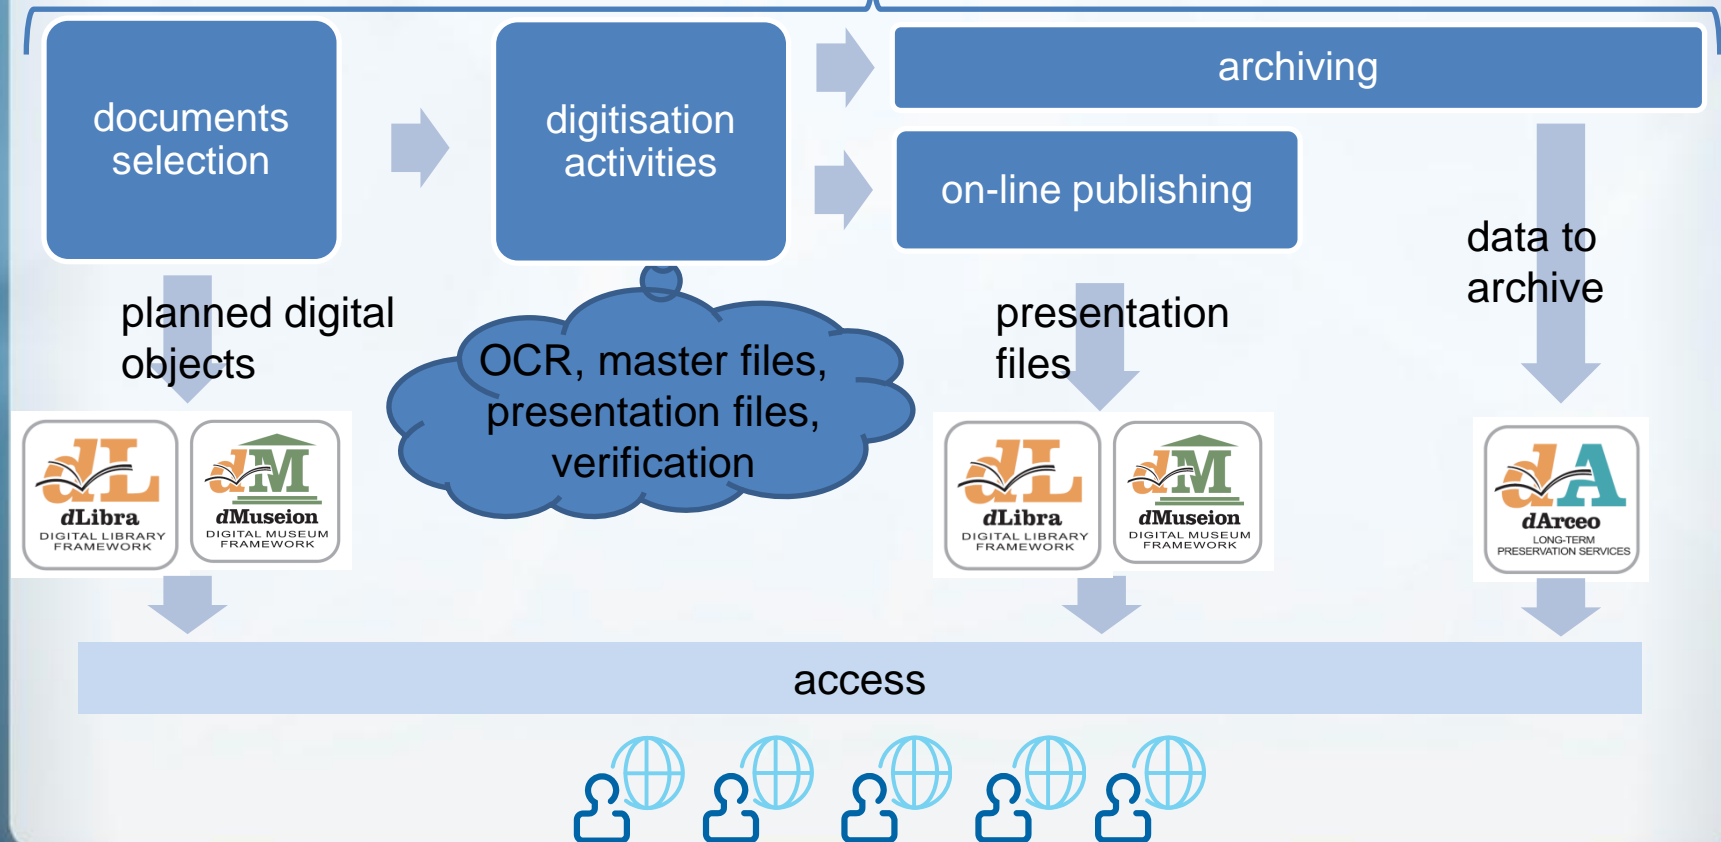

tools

projects

Digitisation process

dArceo

- Long term preservation system for images, text and a/v content
- Uses well know standards and formats
 - METS as a metadata container
 - PREMIS for recording events related to files and objects
 - TextMD, DocumentMD, MIX, AES57 for technical metadata
- Extendible in the context of migration, conversion and delivery services
- Used in production mode in Poland

PREMIS in dArceo

- Object level PREMIS metadata are embedded into METS
 - OAI identifier
 - Relation to other objects
 - Associated events (e.g. creation, transformation)
 - List of all associated files in the AIP
- File level PREMIS metadata are located in separate XML files
 - Identifier in the context of object
 - Characterisation information
 - Associated events (e.g. creation, validation)

PREMIS and METS issue

- Issue: technical metadata duplication
 - METS reference to external file
 - PREMIS characterisation section
 - PREMIS characterisation extension (external file)
 - Guidelines for using PREMIS with METS do not state clear rules
- Risk: inconsistency in the AIP
- Solution: clear guidelines, e.g. to use only one approach of all possible

PREMIS issue 1

- Issue: technical metadata inconsistency within PREMIS
 - size
 - formatDesignation
 - formatRegistry
 - objectCharacteristicsExtension

PREMIS issue 1

- Issue: technical metadata inconsistency within PREMIS
 - size
 - formatDesignation
 - formatRegistry
 - objectCharacteristicsExtension

PREMIS issue 1

- Issue: technical metadata inconsistency within PREMIS
 - size
 - formatDesignation
 - formatRegistry
 - objectCharacteristicsExtension

PREMIS issue 1

- Issue: technical metadata inconsistency within PREMIS
 - size
 - formatDesignation
 - formatRegistry
 - objectCharacteristicsExtension
- Risk: inconsistency in the AIP
 - If present content analysis is required in order to identify the correct metadata
- Solution: clear guideline to use only one approach of all possible

PREMIS issue 2

- Issue: vocabulary for eventType
 - No vocabulary enforced, suggested to build own
 - Starter list proposed, but not aligned with OAIS terminology (migration instead of transformation)
- Risk: decreased interoperability and misunderstandings
- Solution: introduce vocabulary or align starter list with OAIS terminology
