
IPres2013 - Lisbon 5th Sep PREMIS Implementation Fair 2013

Preservation of audiovisual digital contents: multimedia metadata

Walter Allasia – walter.allasia@eurixgroup.com
Werner Bailer – werner.bailer@joanneum.at

Agenda

Background: the Presto* experience on AV

- Overview of PrestoSpace
- AV Preservation within PrestoPRIME

Current metadata for AV contents

- EBU, MPEG, W3C, ...

MPEG Multimedia Preservation Ad hoc Group

- MPEG-A MP-AF DataModel and current Working Draft
- Ongoing work: PrestoCentre and Presto4U

Presto* experience in AV

00:27:22 terrible problem in that their leaders are really squaring with the voters about what's motivating these people we continue to say they want to destroy our freedoms and liberties in other democracies in gender equality in believe that has almost nothing to do with what this war is about what is this for about a dozen

00:27:40 or is about is that religion is the bedrock in the broadest sense and the belief among many muslims both those who support and isn't involved and those who voted in line that at least u. s. foreign policy in some sense is what amounts to an attack on islam

00:27:58 mean when you see those pictures from guantanamo bay when you see the pictures are so great that is obviously this is the guy was suggesting he would continue taunting for precisely the people who do this

00:28:09 continent because produce is a sad fact that some of things we've done on all sides have encouraged terrorism i'm sure there'll be more terrorist government as a result of the war he doesn't reason that the war in iraq was wrong because the tax code book called the revenge and that is going to galleries with he had paid the price lesson this have any idea what side they

00:28:29 just listening to mr. livingston earlier today just spoken to the president of the war as mr. gallaway saying he believes that yesterday's events had nothing whatsoever to do with the rav will be doing that i think he's said the right tool we have felt like the terrorists and long before the americans the bomb went into a well known before witnesses what if we're not doing the right thing the western powers involved in the right thing what is the right thing to do

File Internet | Media file protected activate 5,308%

The screenshot shows the Presto Space software interface. At the top, there's a navigation bar with tabs: Info, Transcription, Semantic Analysis (which is selected), Content Analysis, and Related Sources. Below this is a large video preview window showing a man in a suit. To the right of the video is a sidebar titled "Related Sources" with a vertical orange bar indicating the confidence level for different entity types. The sidebar lists:

- Person: STEPHEN ZOBINSKI (orange bar)
- Organizations: AFRICAN COUNTRIES (orange bar), African Union (orange bar)
- Locations: LAGOS (light blue bar)
- Geo-political entities: East African Federation (green bar)

Below the video preview, there are two sections labeled "37 - Programme" and "38 - South Asia". At the bottom, there's a timeline with three specific frames highlighted with timecodes: 00:46:43:13, 00:47:02:18, and 00:47:18:17. The bottom left corner shows the file name "FILE" and the bottom right corner shows "5,308%".

Timed metadata: zoom, pan, tilt, ...

/

The screenshot displays the Presto Space software interface, which is an integrated solution for audio-visual preservation and access. At the top, there is a navigation bar with tabs for Info, Transcription, Statistical Analysis, Content Analysis (which is currently selected), and Related Sources. Below the navigation bar, a video player shows a scene from a video with the timestamp TCR 22:33:42:14. The video frame shows a person in a long coat walking through what appears to be a hallway or lobby. To the right of the video player is a large preview window showing a sequence of frames from the video, with a blurred effect applied to the right side. Below the preview window is a timeline with several time markers: 00:02:57:18, 00:02:52:22, 00:02:08:06, 00:02:13:03, 00:02:18:06, 00:02:23:09, 00:02:38:12, and 00:02:. The timeline also includes a 'TIME' marker at 00:02:23:05 and a 'TIMELINE' marker. At the bottom of the interface, there are two rows of thumbnail previews. The first row contains three thumbnails with timestamps: 00:46:43:13, 00:47:03:00, and 00:47:19:17. The second row contains five thumbnails, though only the first four are clearly visible. The overall layout is clean and professional, designed for efficient media management and analysis.

PrestoPRIME

Urgent needs: analog tapes and films

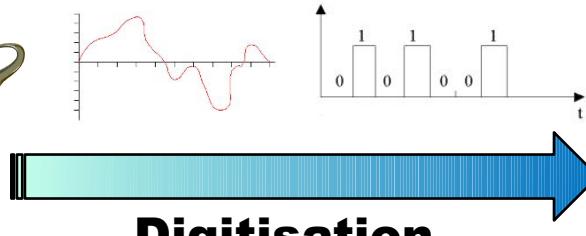

The last 100 years of AV archiving

Digitization

**Film, BVU, Beta,
DV, Vinyl,
OpenReel ...**

Files

**Digitisation means
generation of files**

Digitization: What digital format?

0% Packet Loss

0.5% Packet Loss

5% Packet Loss

Every format has RISKS!!

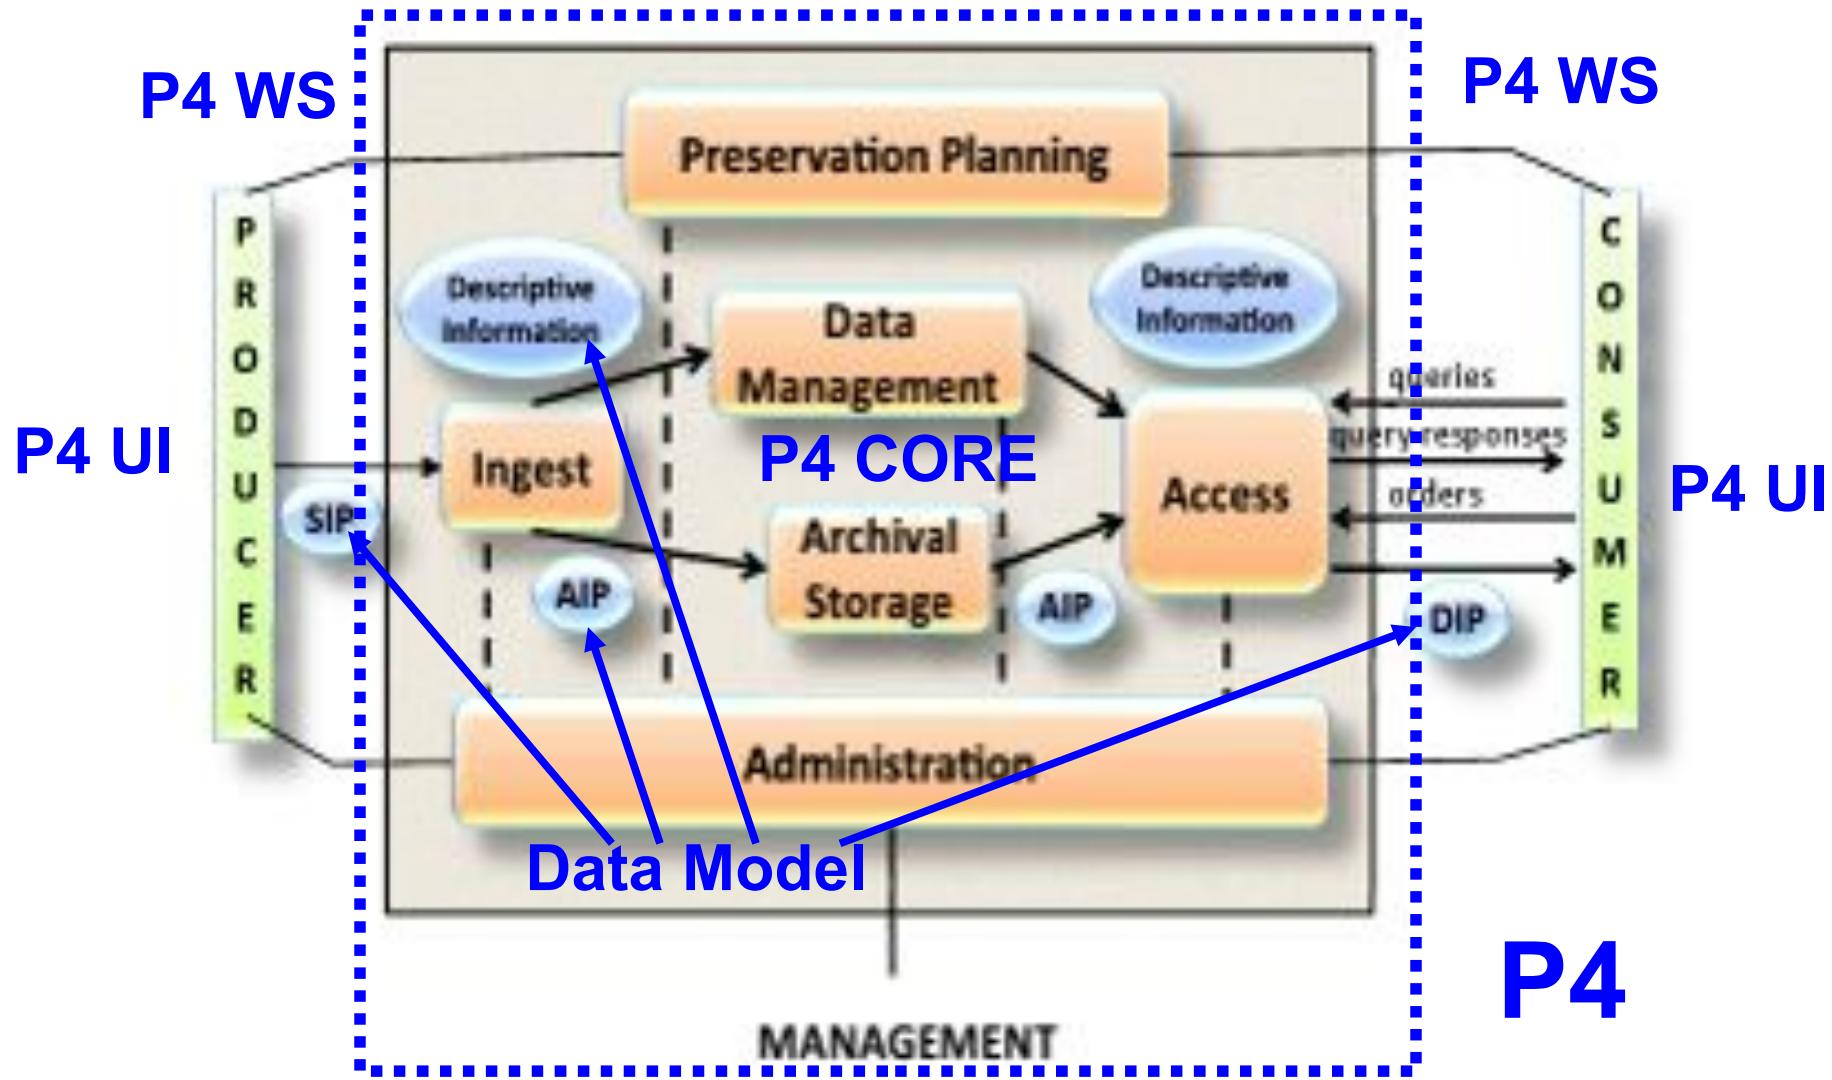

one byte of corruption to a **JPEG2000** image
But other formats are no better!

- Focus on preservation of AV content in broadcast Environment
- OAIS compliant, based on PrestoPRIME data model (METS and PREMIS, DC, MPEG-7 AVDP, MPEG-21 MCO)
- Open: core components released as open source (GPLv3)

Publicly available at:

- **<https://github.com/prestoprime/p4>**

P4 mapped onto OAIS

P4 - PrestoPRIME Preservation Platform

Metadata for multimedia

AV Descriptive and Technical Metadata

AV Contents have complex timebased metadata

PrestoSpace model (P_Meta and MPEG-7 within a wrapper)

MPEG-7 part 9 **AVDP** (AudioVisual Description Profile)

EBU Core and **P_Meta**

W3C Media Annotations (OWL representation)

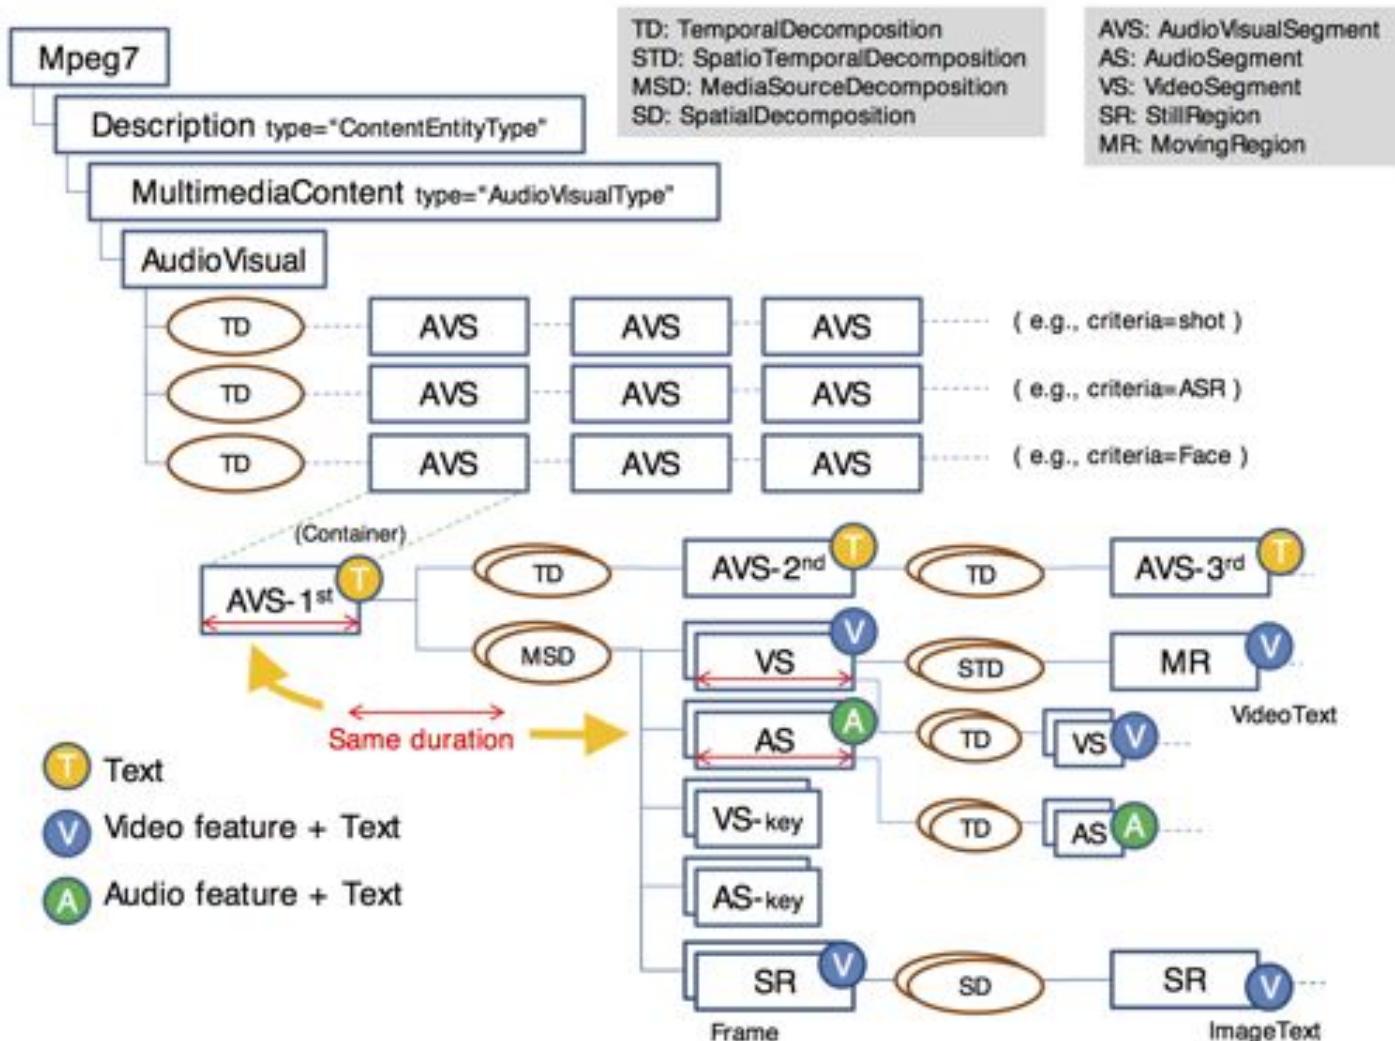

Broadcasting Rights (**contracts**)

MPEG-21 Contract Expression Language (XML representation, part 20)

MPEG-21 Media Contract Ontology (OWL representation, part 21)

MPEG-7 part 9 – AVDP

<http://mpeg.chiariglione.org/standards/mpeg-7/profiles>

Content-based video QA metadata

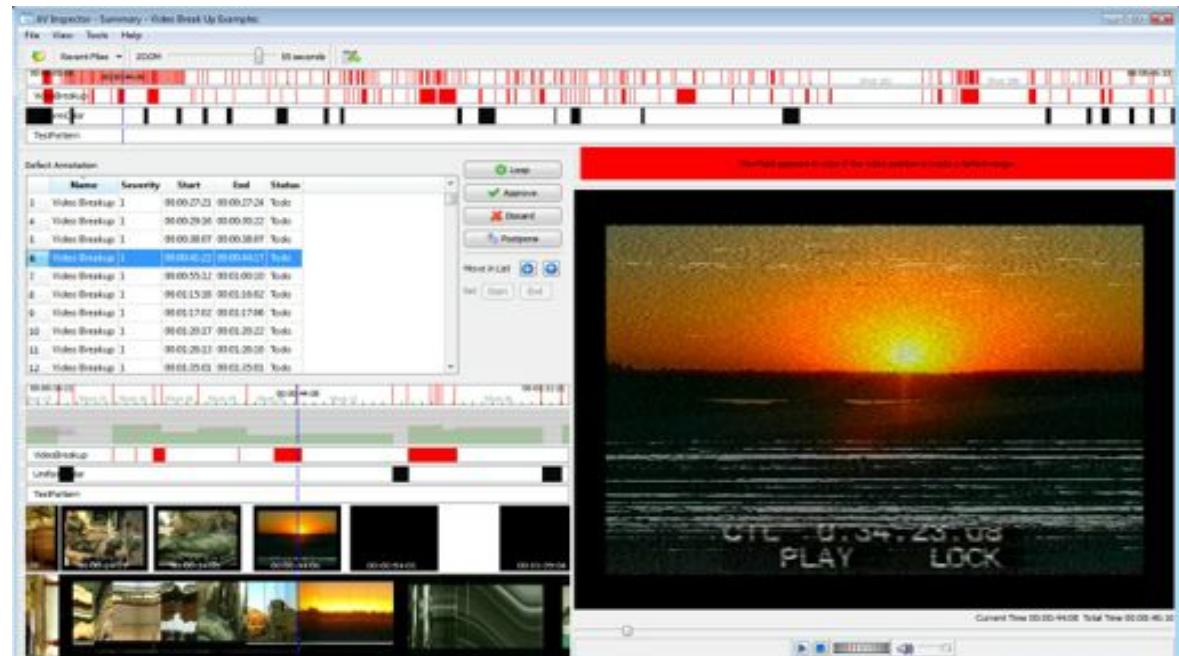

Purely technical checks can detect:
stream/format compliance, storage errors, transfer errors
But these do not “see” errors in the video.

Content-based Video Quality Analysis

Detection of severe visual defects

MPEG Multimedia Preservation AhG

Metadata challenge for **audiovisual** contents

How to document in an *interoperable* way AV contents?

- Metadata models, mapping and vocabularies

How to *enrich metadata*?

- External sources, user annotations, integrating with in-house documentation

How to handle complex *rights* information (B2C, B2B,...)?

- Rights modelling

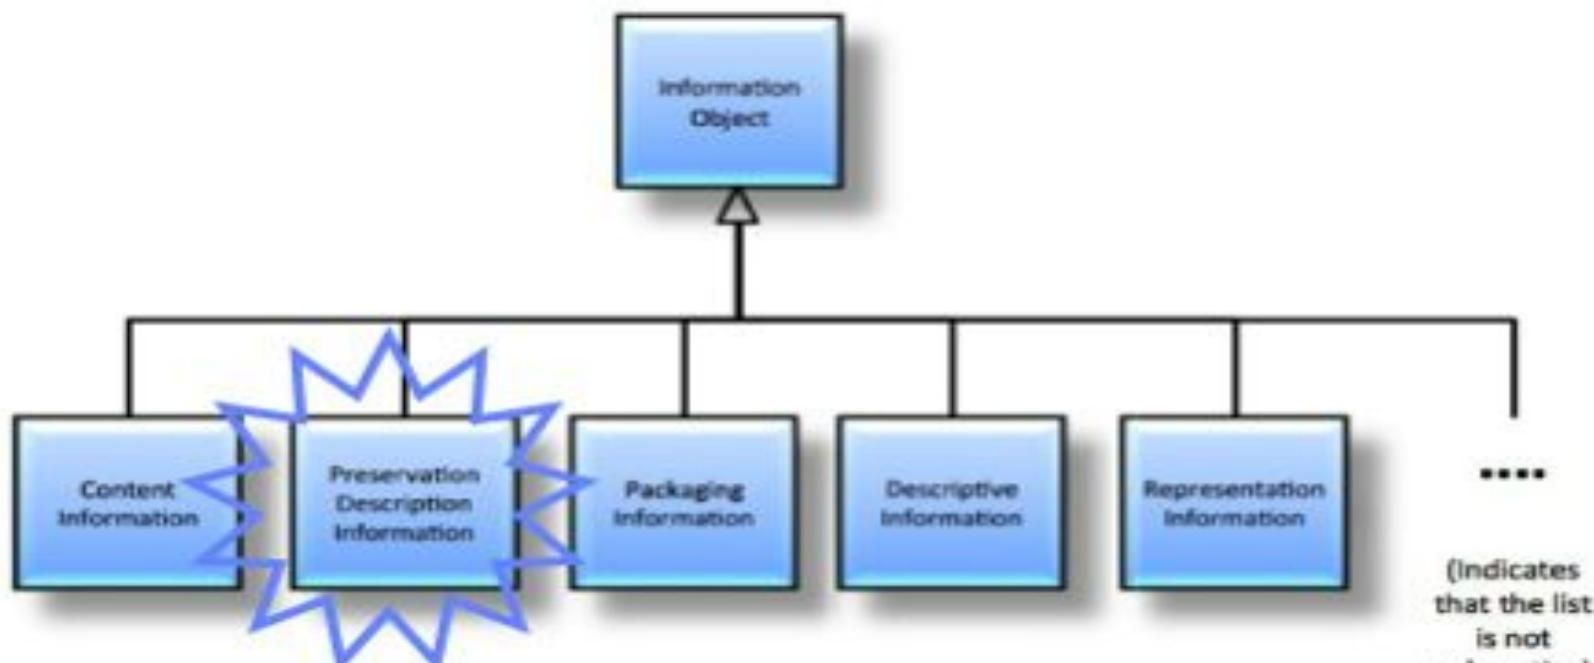

How to determine describe the use of AV contents?

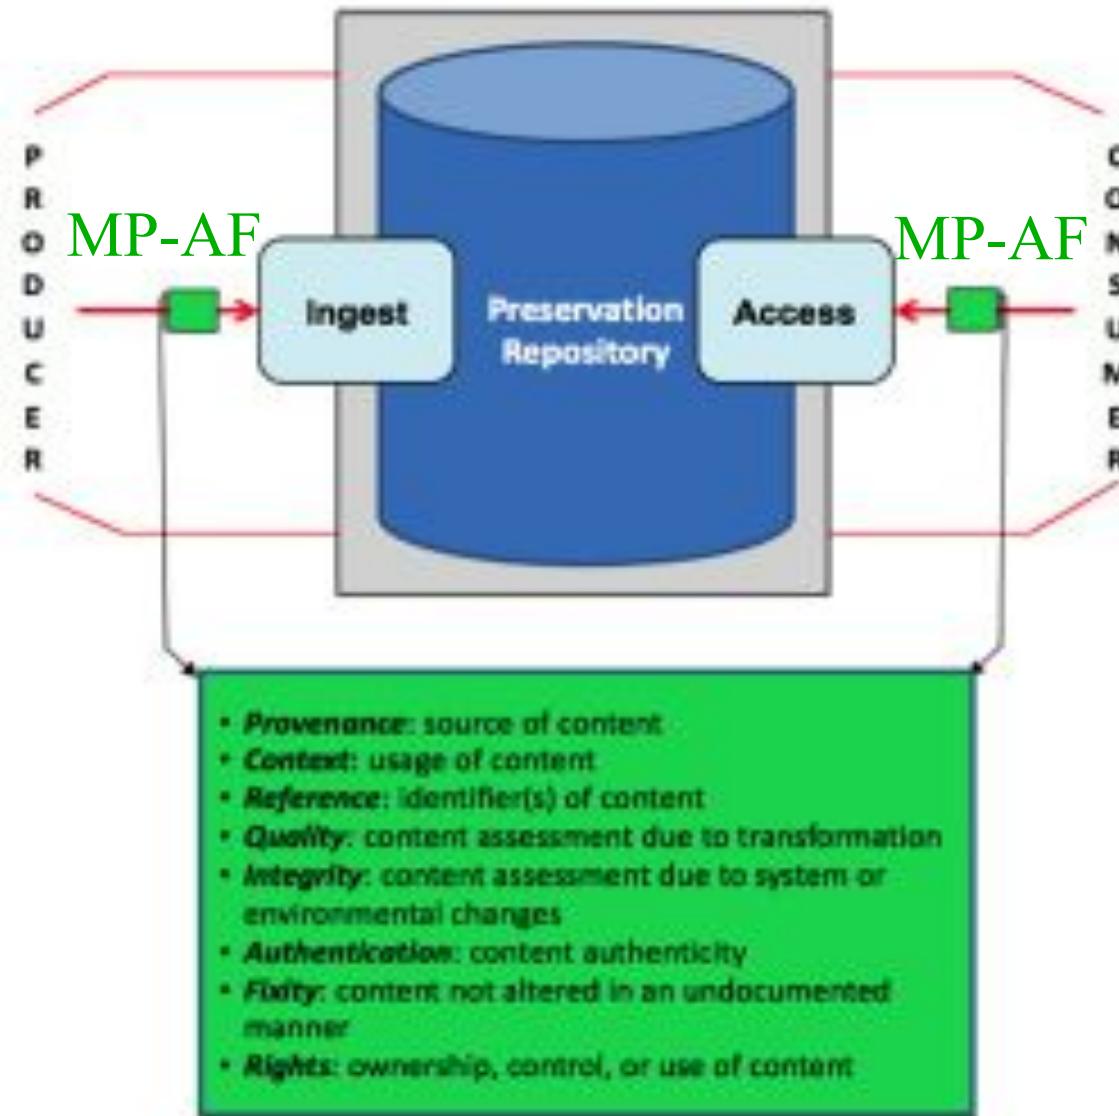

- Content tracking, registries

In 2011 NIST (US) and EURIX, in collaboration with the PrestoPRIME project (EU), have set up the MPEG Multimedia Preservation Ad hoc Group and a datamodel has been identified: the MP-AF

<https://mailhost.tnt.uni-hannover.de/mailman/listinfo/preservation>

Aims of MP-AF

- Standard representation for **AV content** preservation information such as fixity checks, format migrations, preservation events, ...
- Suitable standard for representing SIP and DIP (ingest/access), enabling exchange between archives with minimal metadata loss (concept of **transferable AIP [DPC]**)
- Easier integration between *AV Archive* and *AV Production contexts*
- Different possible containers: for example MXF, AXF, PA-AF (currently adopted by NTT within the NDL)

Current MP-AF core DataModel

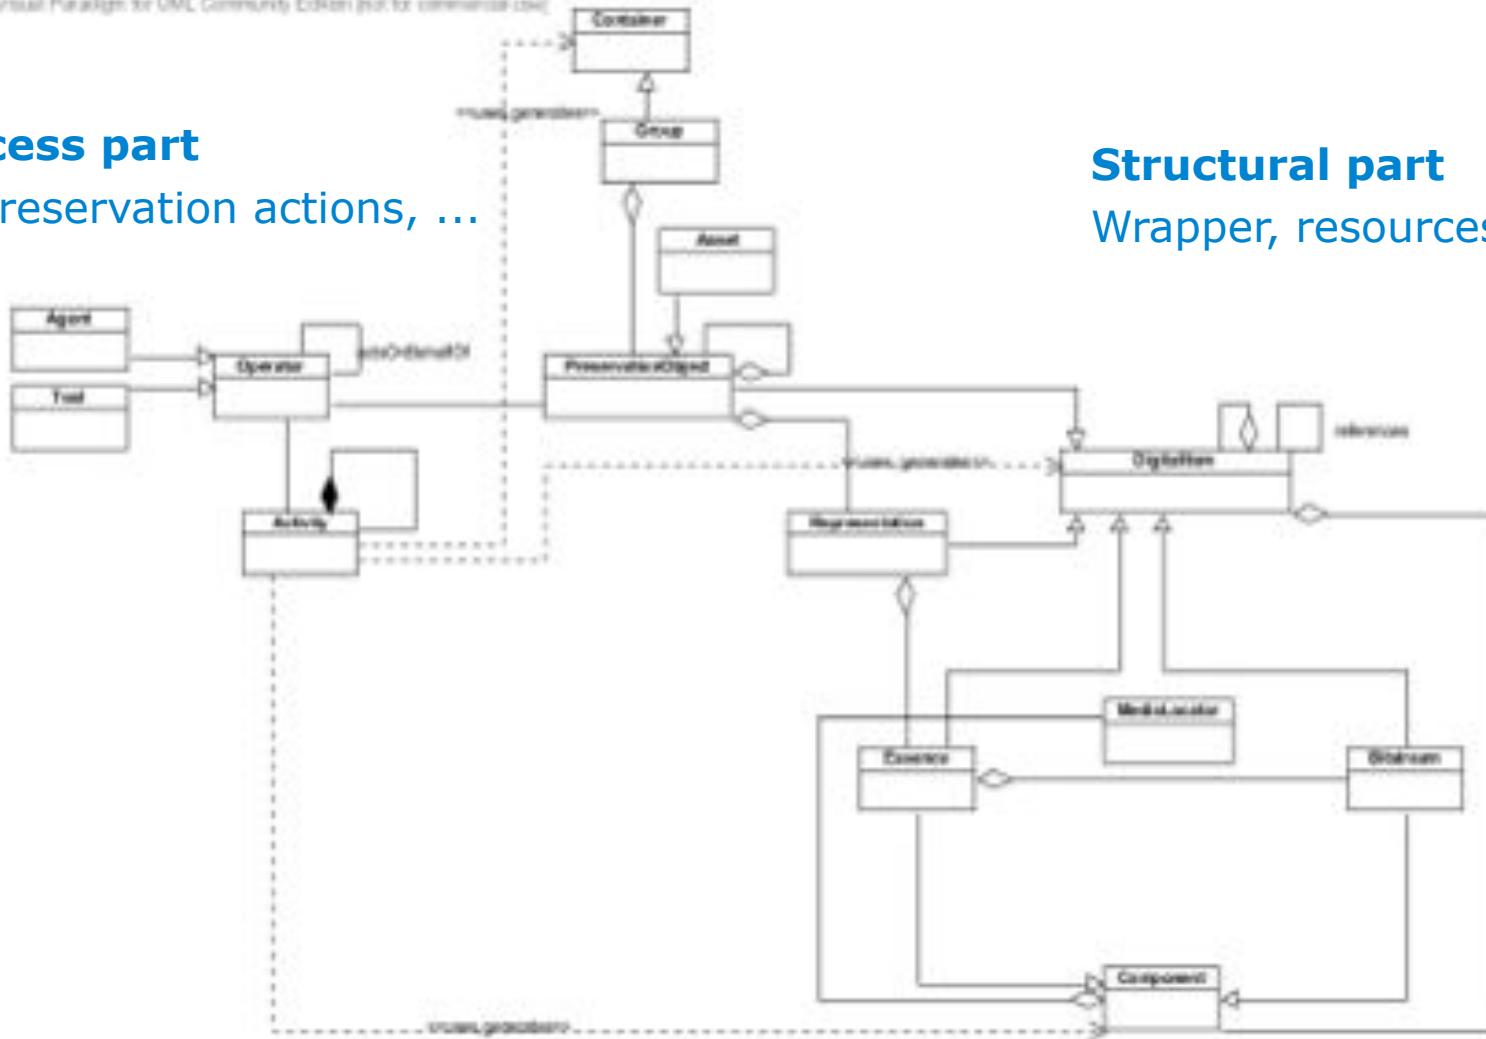

Visual Paradigm for UML Community Edition (not for commercial use)

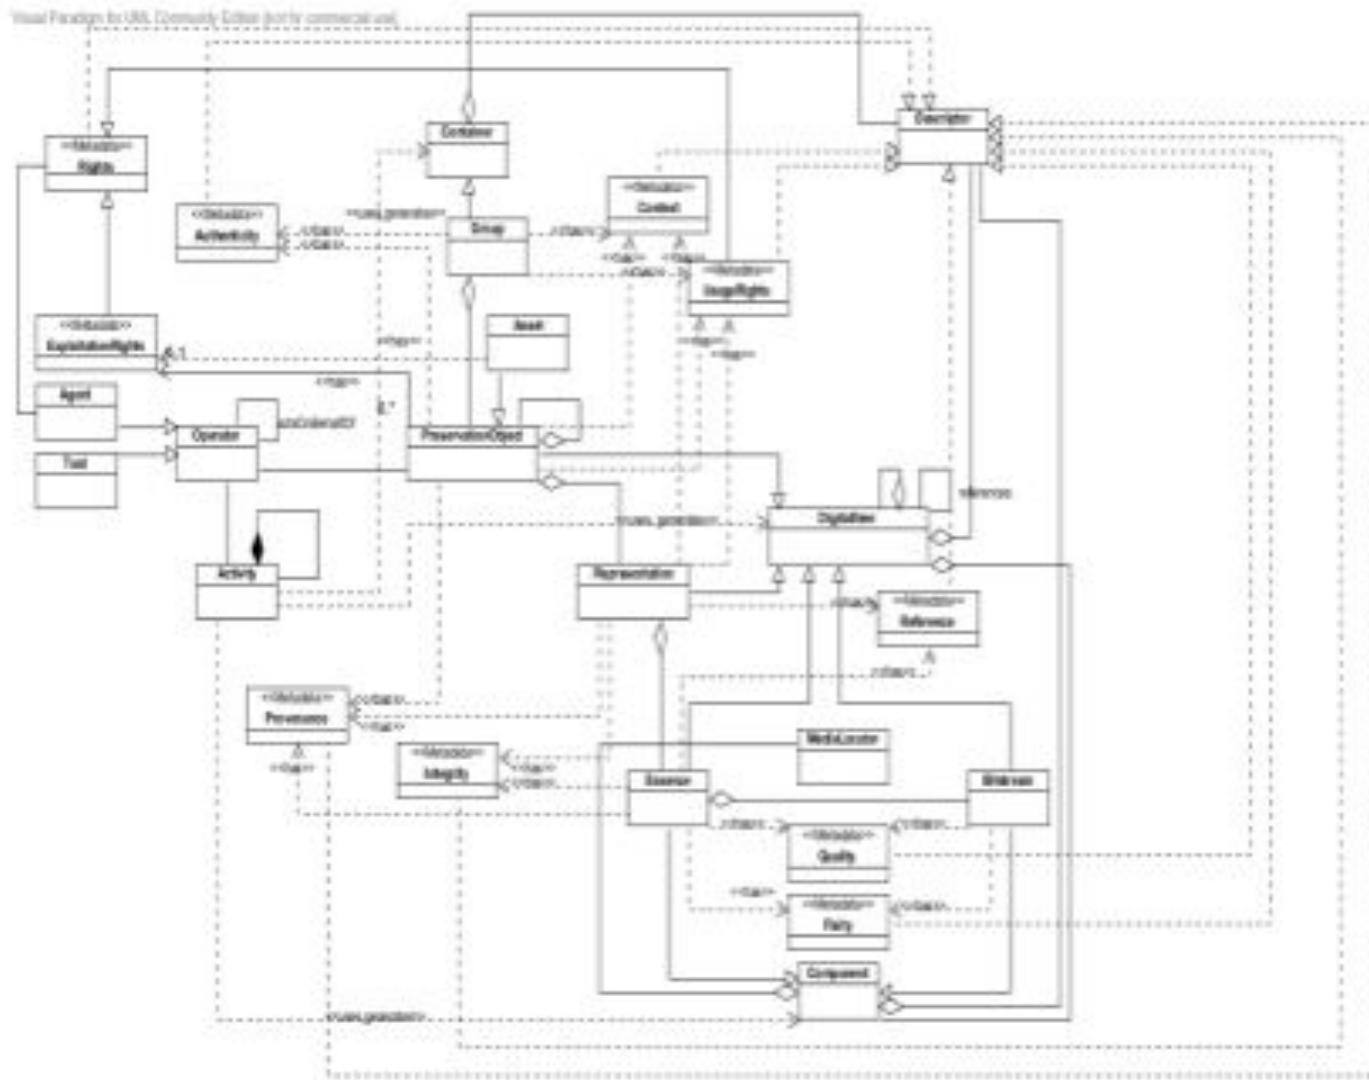

Process part

AV Preservation actions, ...

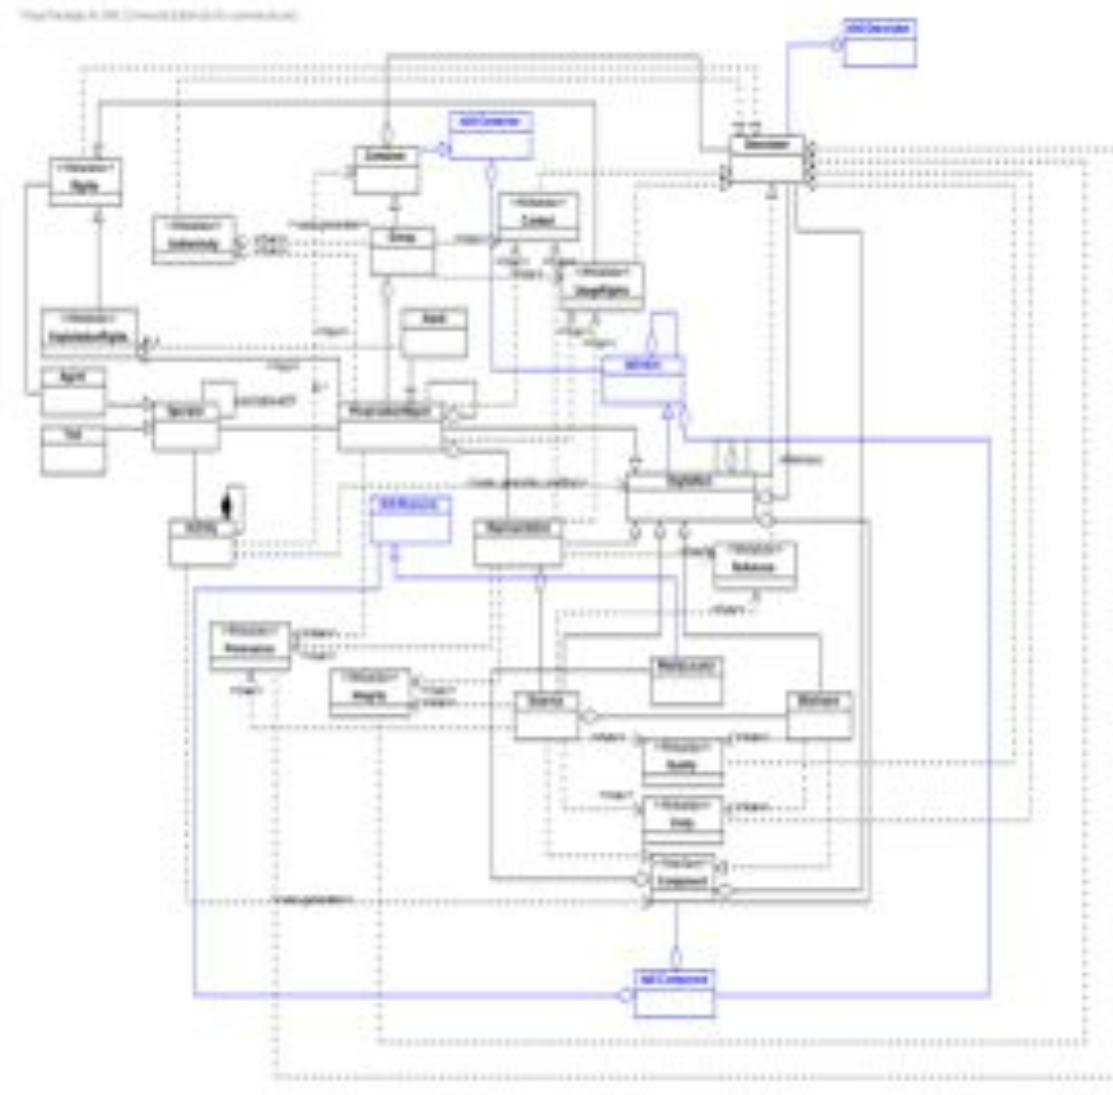

Structural part

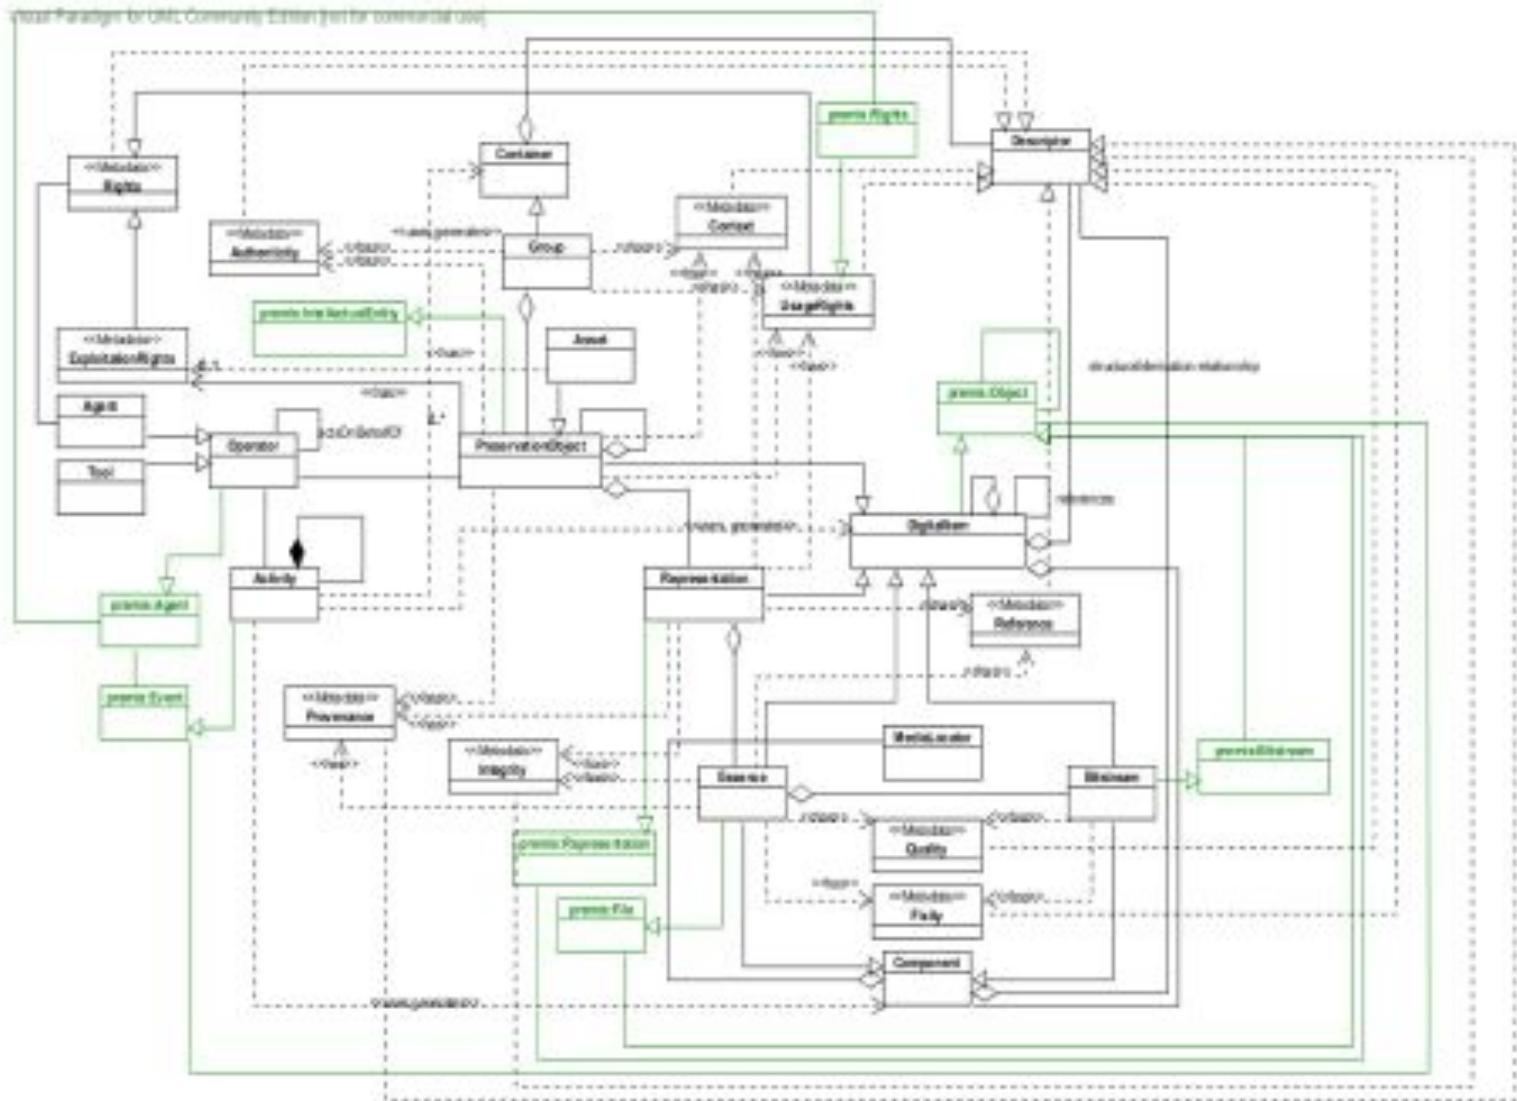

Wrapper, resources,...

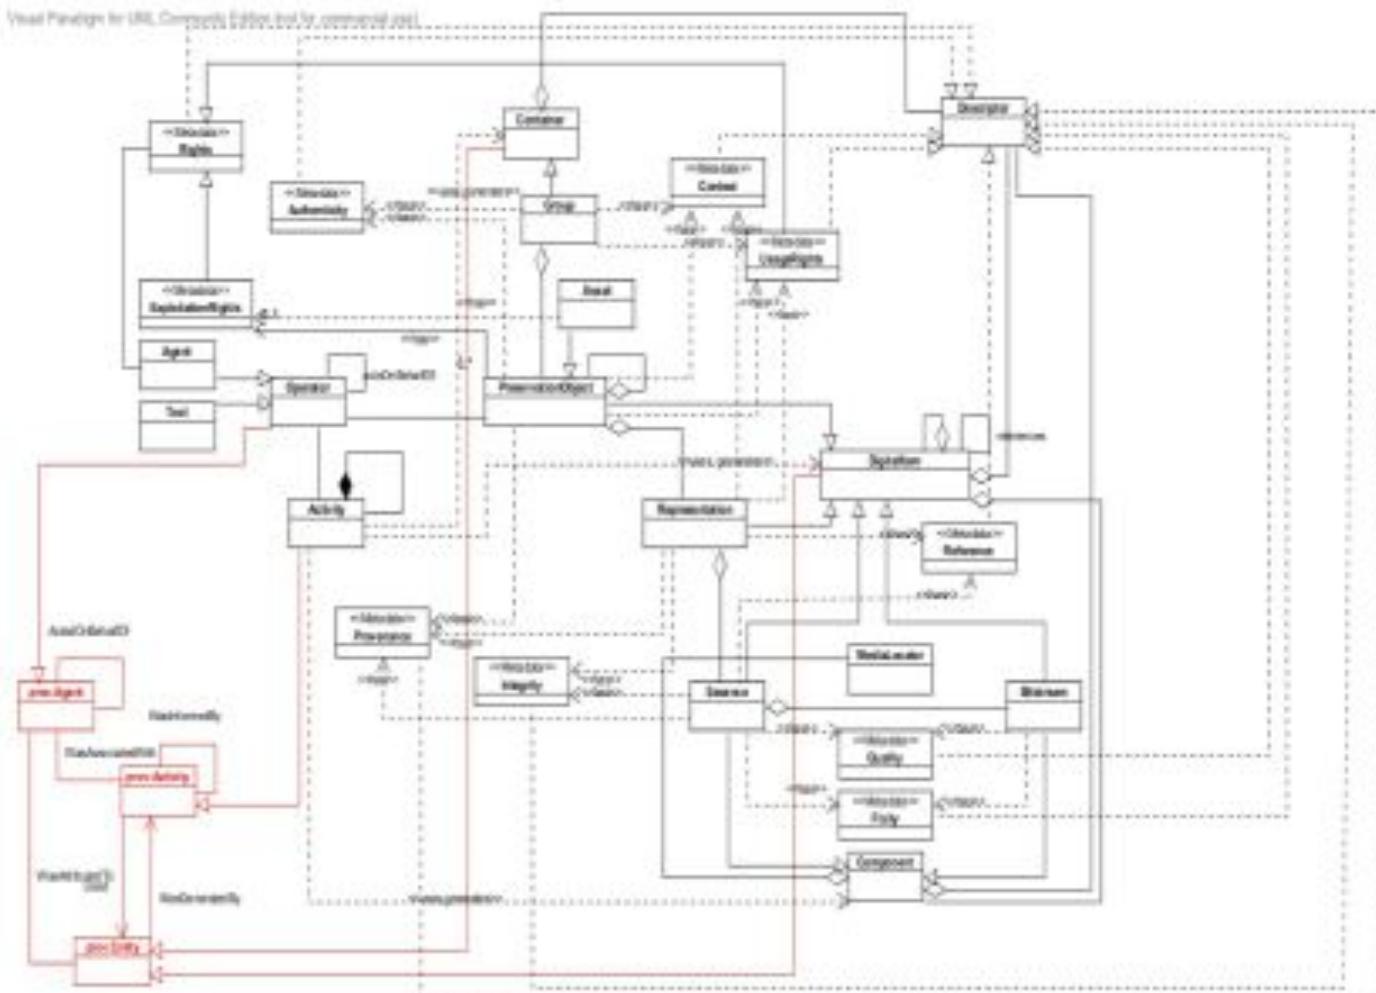

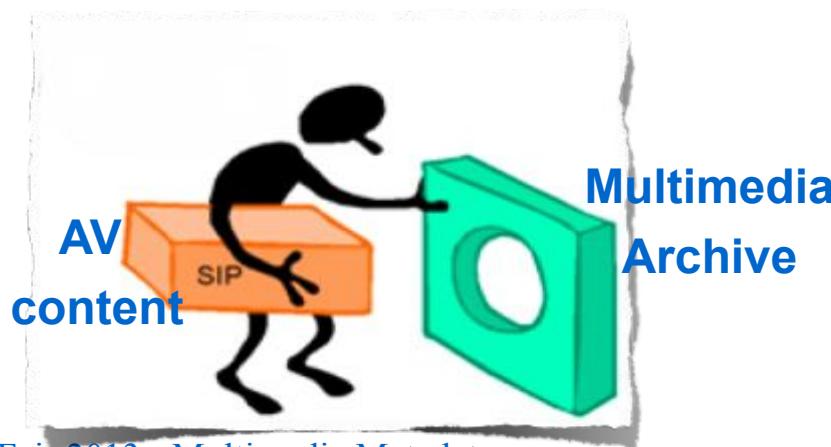

MP-AF DataModel with MPEG-21

- **exchange** between preservation systems/repositories
- **change/upgrade** preservation system
- exchange with **service providers**
- **transferable** metada format: mapping for other standards
- technologies for MP-AF implementation are widely available

Ongoing work

Projects currently contributing to the MP-AF

Tools, blogs and CoPs discussions

The screenshot shows the PrestoCentre website with a red navigation bar containing links for Home, News, Calendar, Library, Forums, Events, Membership, and About Us. A search bar is at the top right. The main content area has a black header with 'P4' and a yellow sidebar titled 'Featured Resources' featuring a video thumbnail. The central content area contains text about the P4 tool, its components, and its workflow engine.

The screenshot shows the Presto4U project page. It features a large '4U' logo with red and blue stripes. Below it, text describes the project's aim to identify useful results of research into digital audiovisual preservation and to raise awareness and improve adoption. It mentions funding from the European Commission's Seventh Framework Programme (FP7) and a duration from 1 January 2013 to 31 December 2014. The page also includes logos for project partners like IFA, Tate, TV2, LUCE, BBC, ina, Rai, KCL, IT, and others.
